

Michael Lyman LinkedIn recommendations:

“Michael is an excellent program manager and natural leader. His leadership in the quality/reliability efforts at Verigy made a significant impact on the processes significant to new product introduction efforts. He works well cross-functionally in the organization and is a thoughtful contributor to the team.” April 22, 2009

“I worked as a colleague with Michael in the Quality Department at Verigy. Michael is an excellent quality and process manager with the ability to influence multi-disciplined technical design teams to embrace knowledge, structure, and processes to insure consistent and long-term product reliability.”

“Michael is detail oriented, motivated and always drive projects to completion. In particular, I was impressed with Michael ability to achieve results with little to no resources. He is also confident with excellent communication and presentation skills. I would definitely recommend Michael as a Program Manager, within Quality, Product, Account or Process management. Regards, Gilad Salamander (Engineering manager at Verigy Inc.)” February 23, 2009

“Michael has excellent skills as a people manager. During the time I reported to Michael he was always aware, and knowledgeable, of the work I was performing. Michael provided proper guidance when necessary, but he also knew when to listen to my recommendations. He also made sure I had the resources (tools, help from other teams, etc) I needed to get my Reliability activities completed. Michael is very knowledgeable of Quality Processes. He is a Quality advocate, and he worked with all

our teams (R&D, Mfg, Marketing, etc) to make ensure they adhered to our Reliability and Product Life Cycle Requirements. Under Micahel's leadership we were able to raise our organizational Reliability awareness, and practices, as measured by an external Reliability Consultant's survey. I highly recommend Michael for his Quality process knowledge; his ability to work a cross different teams, and as a people's manager. Aldo Nina Reliability Engineer” February 23, 2009
